

T H E READY RECKONER;

O R,
TRADER's most useful ASSISTANT,
In BUYING and SELLING
All Sorts of Commodities either Wholesale or Retail.

Shewing at one View

The AMOUNT or VALUE of any Number or Quantity of Goods or Merchandise from one Farthing to Twenty Shillings, either by the *long* or *short* Hundred, *half* Hundred or *Quarter*, Pound or Ounce, Ell or Yard, &c. &c.

In so plain and easy a Manner, that Persons quite unacquainted with Arithmetic may hereby ascertain the Value of any Number of Hundreds, Pounds, Ounces, Ells, or Yards, &c. at any Price whatever: And to the most ready in Figures, it will be equally useful, by saving much Time in casting up what is here correctly done to their Hand.

TO WHICH IS ADDED,

1. A Double Table of PORTUGAL MONEY, from 1 to 1000.
2. A Table of EXPENCES or WAGES by the Day, Week, Month, or Year.
3. A Table of ANNUITIES, and COMMISSION or BROKERAGE, from One to One Eighth *per Cent*.

By DANIEL FENNING,
AUTHOR OF
THE ROYAL ENGLISH DICTIONARY;
YOUNG MAN'S BOOK OF KNOWLEDGE;
USE OF THE GLOBES;
THE UNIVERSAL SPELLING BOOK;
A NEW GRAMMAR OF THE ENGLISH TONGUE;
And OTHERS.

THE EIGHTH EDITION.

With Additions on Board and Timber Measure, Brick-work, and Gauging by the Pen and Slip-Rule.

Carefully revised and corrected by JOSEPH MOON,
MATHEMATICIAN, SALISBURY.

L O N D O N:

Printed for S. CROWDER, at No. 12, in *Pater-noster-Row*; and
B. C. COLLINS, on the *New Canal*, in *Salisbury*.

M,DCC,LXXXV.

[Price One Shilling and Sixpence.]

P R E F A C E.

*To all Persons who are concerned in
BUYING and SELLING ;*

BUT MORE PARTICULARLY

*To House-Keepers, House-Chandlers,
Country Shopkeepers, Artificers, &c.*

GENTLEMEN,

YOUR kind Encouragement of the former Editions of this Work, gives me great Reason to return you Thanks; by enabling me to send another Edition into the World under your Approbation.

You have several Books, indeed, of this Kind published; but you may depend that none so justly deserves the Title; for it may, with Propriety, be called *The READY RECKONER*, both for its Ease, Usefulness, and Extensiveness, as will appear as follows.

1. *The Trader's Sure Guide*, and also some other Books of this Sort, begin at 1 Farthing, and continue no farther than 18 Pence, whereas this continues to 2 Shillings, rising only 1 Farthing in Order.

A 2

2. The

2. The *Trader's Sure Guide* rises one Penny at once from 1 to 5 Shillings ; but *this* rises but a Halfpenny a Time.

3. The *Trader's Sure Guide* rises Six-pence at once, from 10 to 15 Shillings ; but *here* we advance but Three-pence, so that you have double the Tables and Calculations : Again,

4. The *Trader's Sure Guide*, and many others, jump over several Numbers that are here continued ; for they immediately go from 100 to 200, whereas *here* you have from 100 continued up to 112 at any Price.

5. From what has been said, it appears you have many thousand Calculations more in this Undertaking than in any other Book, which certainly must be of greater Use than those Books that have them not.

6. 'Tis true that nothing is more liable to Errors than large Tables of any Sort ; for though there requires no great Scholarship to make such a plain Book ; yet the vast Multiplicity of Figures, and continual Series of different Numbers, render the Work much more difficult than Persons in general are aware of ; and though it is possible that such a Book may be correct, yet it may naturally be expected that Errors of some Sort or other may slip the Notice of the most attentive single Examiner.

7. This being the real Case of Works of this Sort, I have taken all the Care that
Time

Time and Ability would allow of, to prevent it, and can assure the Public that every single and separate Sheet has been examined by three different Persons with all possible Caution and Attention, so that I am apt to think you may depend on the Exactness of the Calculations.

In short, that it may be a useful Book in general, I have added a Set of Tables of the Value of various Pieces of foreign Coin, Tables of Interest, Brokerage, &c. and a short and easy Method to measure Timber, Brick-work, and gauging common Tubs and Casks, both by the Pen and Sliding Rule, which will be of great use to Country Wheel-wrights, Carpenters, Bricklayers, Apprentices, &c.

In fine, I make no Doubt but it will answer your End, according to the Design, which will give great Satisfaction to,

GENTLEMEN,

Your very humble Servant,

D. FENNING.

To the PUBLIC.

AS it is very likely this little Book may fall into the Hands of many Country Artificers, Apprentices, and other Persons who would be glad to have some Notion of measuring Boards, or any regular Piece of Timber, or Brick Work; I thought it might be agreeable to add something of this Sort; and tho' I have not treated upon each of them in so full a Manner as I have in my ARITHMETIC, yet the Rules and Examples are sufficient for any industrious Person to gain a further Knowledge of any of these Subjects, by diligently observing what is here laid down.

1. *Of Board or Superficial Measure.*

Superficial Measure is that which has Length and Breadth only, and is measured by the Square Foot, containing 144 Inches; therefore,

RULE, Multiply the Length in Inches by the Breadth in Inches, and divide by 144, the Quotient gives the Square Feet, and the Remainder is the Square Inches.

1. There is a Board 9 Feet 6 Inches long, and 9 Inches wide, I demand the Content.

Ans. 7 Feet 18 Inches.

By the Slip Rule.

Set the Breadth of the Board (*viz.* 9 Inches) on the *Slip* to the upper 12, next the Edge

Edge of the Rule; then against the Length of the Board ($9\frac{1}{2}$ Feet) in the same Line on the Rule you will find 7 Feet and half a Quarter, or 7 Feet 18 Inches on the Slip.

2. How many Bricks, 9 Inches long and 4 Inches wide, will pave a Room 15 Feet long, and 14 wide? *Ans.* 840.

Multiply the Length 15 by the Breadth 14, gives 210 Feet; this multiplied by 144, the Inches in a Foot, gives 30240 Square Inches; then multiply 9, the Length of the Brick, by 4, the Breadth, gives 36 Square Inches in one Brick: Divide therefore 30240 by 36, gives 840, the Bricks required.

And thus for any Thing of this Sort.

2. *Of Timber or Solid Measure.*

In this Sort of Measure 1728 Solid Inches make 1 Foot; because 12 multiplied by 12, gives 144 Superficial or Square Inches; and 144 multiplied by 12 gives 1728 solid Inches. The common Method to measure Timber is thus:

With a small Cord take the Round or Circumference of the Tree, neither in the largest or smallest Part; then double the said String into 4 Parts, and apply it to any common 2 Feet Rule, and observe what it measures; for *this* is called the *Girt* of the Tree: Then the Rule is, multiply the *Girt* by itself (which is called squaring the *Girt*) and then multiply the Product by the Length of the Tree in Feet, and divide the Product

Product by 144, gives the Content in Solid Feet. Or otherwise multiply the Square of the *Girt* by the Length in Inches, and divide by 1728, gives the Content.

1. There is a Tree 14 Inches clear * *Girt*, and 9 Feet long, I demand the Content.

Here I multiply 14, the *Girt*, by itself, (that is 14) and the Product is 196; this multiplied by 9, the Length, gives 1764, which divided by 144, gives $12\frac{1}{4}$ Feet.

By the Slip Rule.

Set the Length (9) on the Slip right against the 12, under the lower Part of the Slip on the Rule (wrote *Girt Line*) then against the *Girt* of the Tree (14) on the *Girt Line*, you will find $12\frac{1}{4}$ on the Slip, the Content, as before.

Of Tapering Timber.

If the Tree be very long and large at one End, and small at the other, you may, with marking it with a Piece of Chalk any where in the Middle, or any crooked Place, measure it as *two* distinct Pieces, in the Manner before directed. Or if it runs strait, do thus:

Take the *Girt* at *two* different Places, neither at the largest nor smallest of all, but as Judgment shall direct; then add these *two* *Girts* together, and take the Half of them

* N. B. The Reason why this is called *Clear Girt*, is because 1 Inch is generally allowed for the Bark in Trees that are pretty large.

for

for a mean *Girt*, and proceed to multiply by the whole Length, as before.

Thus a Tree 20 Inches *Girt* at one End, and 40 at the other (the mean *Girt* is 30) and 9 Feet long, contains, according to the customary Method, $56\frac{1}{4}$ Feet.*

3. Of Brick-Work.

Brick-Work is measured by the Square-Rod, that is $5\frac{1}{2}$ Yards, or $16\frac{1}{2}$ Feet squared, that is, $272\frac{1}{4}$ square Feet make *one* square Rod of Brick-Work, at $1\frac{1}{2}$ Brick thick, which is the Standard for the Thickness of all Walls, to which Brick-Work is reduced. But 272 Feet being near enough for common Use, it will be sufficient.

RULE. Multiply the Length of any regular Wall of $1\frac{1}{2}$ Brick thick by the Height, and divide by 272, gives the Content in Rods, and the Remainder in square Feet.

* The customary Way of measuring tapering Timber is certainly very erroneous, and much in favour of the Buyer, it giving the Content less than it really is; and the more the Tree is tapering, the greater is the Error: And the Method of finding a mean *Girt*, recommended by the Author in the former Editions, (which is a false Method) is so far from diminishing this Error, that it considerably augments it.

The same may be observed with respect to what is said about a mean Diameter at the Bottom of Page xi. Such false Directions tending to mislead, and not instruct, we have discontinued them in the present Edition.

Room does not permit to give the true Method of measuring these Solids as Frustums of Pyramids or Cones; and if it did, it would be of little Use, so long as Custom is predominant.—*Editor.*

(x)

There is a Wall 76 Feet long, 9 Feet high, and $1\frac{1}{2}$ Brick thick, I demand the Content.

I multiply 76 by 9, and divide by 272, and the Quotient gives two Rods and 140 Feet, viz. better than $2\frac{1}{2}$ Rods.

By the Slip.

Set 272 on the Slip to the Height 9 on the Rule above it; then against 76, the Length, on the Slip, is rather better than $2\frac{1}{2}$ on the Rule.

4. *Of Walls being more or less than $1\frac{1}{2}$ Brick thick, to tell the Content.*

Having found the Content first of all for $1\frac{1}{2}$ Brick thick, say thus: as the Half Bricks in the Standard, viz. 3, are to the Content at that Thickness, so is the Number of Half-Bricks in the Thickness of any Wall to the Content of the required Wall.

Note. But as there is some Trouble in this, and in some Cases it will be very difficult for the Learner to come to a true Answer at two Operations, I have here added a Table, by which a Piece of Brick-work at any Thickness may be done at one Operation, by making the following Numbers your Divisors, viz.

Multiply the Length of the Wall by the Height: then,

For 1	} Bricks thick,	Divide by	408
$1\frac{1}{2}$			272
2			204
$2\frac{1}{2}$			163
3			136
$3\frac{1}{2}$			116
4			102

Thus the Wall in the foregoing Example, 76 Feet long and 9 Feet high, at $1\frac{1}{2}$ Brick thick,

thick, is 2 Rods and 140 Feet: I demand its Contents at 3 Bricks thick.

I multiply the Length by the Height as before, and now, instead of dividing by 272, I divide by 136 (the Divisor in the Table for 3 Bricks thick) and I have for Answer 5 Rods 8 Feet. And thus for any Thickness, observing well the Divisor.

5. *Of Gauging.*

The Way to gauge any common Square, or square Cooler, or oblong Square, is thus:

Multiply the Length by the Breadth in Inches, then multiply that Product by the Depth, and divide by 282, and the Quotient gives the Content in Ale Gallons. If you divide by 2150, it gives the Bushels.

Thus a Cistern 60 Inches long, 50 Inches wide, and 40 Inches deep, will contain 425 Gallons, and about 55 Bushels, 3 Pecks.

1. *Of Tubs or Round Figures.*

Multiply the Square of the Diameter by the Depth, and divide the Product by 359 for Beer, 294 for Wine, and 2737 for Bushels.

Thus you will find a Tub, whose Diameter is 36 Inches every where, and 50 Inches deep, holds $180\frac{1}{2}$ Beer Gallons, $220\frac{1}{2}$ Wine Gallons, and $23\frac{1}{2}$ Bushels.

2. *Of Tubs whose Diameters at the Bottom and Top are not equal.*

The common Way, like measuring Timber, is to add both Diameters together, and take

take the Half for a mean Diameter; and then proceed as before.

Of Casks.

Any common regular Cask may be guaged thus, provided both the Head Diameters are nearly equal.

First, square the Bung Diameter, and then multiply it by 2, to which add the Square of the Head Diameter; then multiply this by the Length of the Cask, and divide by 1077 for Beer, 882 for Wine.

Thus you will find a Cask, whose Bung Diameter is 28 Inches, the Head 25, and Length 36 Inches, to contain 73 Ale and $89\frac{1}{2}$ Wine Gallons.

6. *To measure any regular square Piece of Ground.*

Take a Rod Pole, viz. a Pole of $5\frac{1}{2}$ Yards long, and measure the Length of the Place or Field, and the Breadth, which set down in Rods; multiply them together, and divide by 160, (the square Rods in an Acre) gives the Content in Acres.

Thus if a Yard be 18 Rods long, and 14 Rods wide, it contains 1 Acre, 2 Roods, and 12 Rods.

These Examples are sufficient to give the young Learner an Idea. If indeed he would know more of the true Method of Mensuration, let him consult my YOUNG MEASURER'S COMPLETE GUIDE, in which these Things are more fully treated of.

A N
E X P L A N A T I O N
O F T H E
W O R K.

First, Upon the Top of the Leaf you will find in every Page the Price of the Commodity from one Farthing per Ounce, Pound, Yard, Ell, or any other Denomination.

2. Every Page is divided into 6 Columns or Divisions; in the narrow Columns stand the Numbers from 1 to 10000, and in the wide Columns, opposite to every respective Number, is shewn the Value or Amount that such a Number comes to, according to the Price fixed at the Top or Head of the Page.

F O R E X A M P L E.

Suppose I wanted to know what 35 Pounds of Tobacco come to at 15 Pence 3 Farthings per Pound, or 35 Yards or Ells of any Thing at the same Price.

N. B. I open the Book till I find 15 Pence 3 Farthings on the Top of the Leaf; and looking in the narrow Column for the Number 35, I find right against it in the wide Column 2l. 5s. 11d. $\frac{1}{4}$, the Answer.

B

At

At 1 Farthing per Pound, Yard, &c.

Note I. For the more ready casting up the Value of any Number of Ports or 36 Shilling Pieces in Pounds Sterling, remember that every 5 Ports make 9 Pounds, and every 7 Ports 12 Guineas.

Note II. For the more ready casting up the Value of Moidores, remember that every 7 make 9 Guineas, and every 20 make 27 Pounds; and for the more ready telling of Cash, observe that 1 Port and 1 Moidore make 3 Guineas; 2 of each make 6; 3 of each 9 Guineas, &c. &c.

TABLE II. Of Expences, Income, or Wages, from One Penny to 10l. per Day, how much it amounts to per Week, Month, or Year. Or having the yearly Income given, to tell how much it is per Month, Week, or Day.

Per Day.			Per Week.			Per Month.			Per Year.

19	14.32	13.13	12.08	11.16	44	24.25	20.55	17.66	15.38
20	14.88	13.59	12.46	11.47	45	24.52	20.72	17.77	15.46
21	15.41	14.03	12.82	11.76	46	24.77	20.88	17.88	15.52
22	15.94	14.45	13.16	12.04	47	25.02	21.04	17.98	15.59
23	16.44	14.86	13.49	12.3	48	25.27	21.19	18.08	15.65
24	16.94	15.25	13.80	12.55	49	25.5	21.34	18.17	15.71
25	17.41	15.62	14.10	12.78	50	25.73	21.48	18.26	15.76

The Use of this Table will easily appear as follows. Suppose I wanted to know how much an Annuity of 12l. a Year will come to in 7 Years, allowing 5l. per Cent. First find 7 Years, and right against it under 5l. per Cent. is 5.79l. which is the Value of 1l. for 7 Years; multiply then 5.79 by 12, and you have 69.48l. that is 69l. 9s. 6d.

NOTE, The Value of the Decimal Parts 48 is thus found, double, or multiply them by 2, it makes 96; then cut off only the Right Hand Figure 6, and the Left will be Shillings, and the Right Pence; thus, .9 | 6 is 9 Shillings and 6 Pence; this is near enough, Farthings excepted.

TABLE

The following Things are very necessary to be known in various Branches of Business.

I. Of Paper, Parchment, &c.

24 Sheets make 1 Quire, 20 Quires 1 Ream, 10 Reams make 1 Bale.—5 Dozen of Skins make a Roll of Parchment.

II. Of Weight, Measures, &c.

<p>A Barrel of Anchovies is about 18lb. A Barrel of Ale 32 Gallons A Barrel of Beer 36 Gallons A Barrel of Gunpowder 112lb. A Barrel of Herrings 500lb. A Cade of Red Herrings 500 A Cade of Sprats 1000 A Clove of Cheese 8lb. A Clove of Wool 7lb. A Dicker of Leather 10 Skins A Fathom in Measure is 6 Feet A Furlong is 40 Rods, or 220 Yards, 8 of which make a Mile A Firkin of Soap 64lb. A Firkin of Butter 56lb. A Keg of Herrings 60, and 2 Kegs make a Hundred A Last of Corn is 10 Quarters, or 2 Loads, or 80 Bushels A Last of Gunpowder 24 Barrels A Last of Hides 12 Dozen A Last of Leather 24 Dickers A Last of Tar 14 Barrels A Load (in common) 40 Bush. A Market Load is 5 Bushels A Load of Hay is from 25 to 30 Hundred Weight A Load of Scotch Coals 1 Cwt. A Load of Bricks 500</p>	<p>A Load of Tiles 1000 A Puncheon of Brandy or Rum from 70 to 100 Gallons A Puncheon of Prunes from 10 to 12 Cwt. A Quintal of Fish 100 Ditto of Corn or Fodder 1 Cwt. A Rod is $5\frac{1}{2}$ Yards A Square Rod is $30\frac{1}{4}$ Yards, or $272\frac{1}{4}$ Feet A Square of Tyling, Roofing, Thatching, &c. means 100 Feet square, viz. 10 long and 10 wide. A Stack of Wood varies in many Countries, but in common it runs 3 Feet high, 3 wide, and 12 Feet long, or 108 Cubic Feet; tho' some make it 3, 4, and 12, which make 144 Feet A Ton means 20 Cwt. A Ton of Lead $19\frac{1}{2}$ Cwt. A Ton of Wine 252 Gallons Ditto of Sweet Oil 236 Gall. A Truss of Hay is from 50 to 60lb. A Wey is 5 Chaldrons A Wey of Cheese in Essex is 32 Cloves, or 256lb. Ditto in Suffolk 42 Cloves or 336lb.</p>
---	--

Value of Gold and Silver Coin.

Note, 1 Grain of Gold value about 2 Pence. A Pennyweight about 4 Shillings. An Ounce 4l. A Pound 48l.

Note, A Grain of Silver value about Half a Farthing, a Pennyweight 3 Pence, an Ounce 5 Shillings.

F I N I S.

E R R A T A.

At 8 Pence $\frac{1}{4}$, line 1, for Penny, read Pence.

At 11 Pence $\frac{1}{4}$

At 17 Pence $\frac{1}{4}$

At 20 Pence $\frac{1}{4}$

} the last line but one, for a, read at.
